EDUCATION

Noida Institute of Engineering and Technology (NIET)

Aug 2024 – May 2028 (Expected)

B.Tech in Computer Science & Engineering — CGPA: 8.3/10 (through 3rd Semester)

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems

EXPERIENCE

Java Developer Intern — Axlero Solutions (Remote)

April 2026 – July 2026

- Translated business requirements into high-level and low-level design for an internal user and role management service, then implemented 6–10 RESTful APIs using core Java and Spring Boot within a layered service architecture
- Built JWT-based authentication and role-based authorization to secure admin-facing endpoints, enforcing scalable, standards-compliant access control across user and role management workflows
- Modeled a normalized PostgreSQL schema within a 4–6 person engineering team, collaborating closely through an iterative, agile-style development process to translate requirements into production-ready data models
- Maintained backend reliability and coding standards through systematic debugging, code reviews, and Git-based version control across iterative development cycles

PROJECTS

AI-Powered App Builder Backend (Lovable Clone)

Solo Project | Java, Spring Boot, PostgreSQL, JWT, Spring AI, Gemini Flash | [GitHub Repo](#)

- Architected and built a full-stack AI application-generation backend that turns natural-language prompts into working, deployable codebases in real time
- Engineered a token-by-token streaming pipeline using Spring AI, delivering incremental LLM output to the client for a responsive, ChatGPT-like experience
- Implemented tool-calling based file retrieval that fetches only the specific files needed for a given edit instead of the entire codebase, keeping the LLM's context window lean
- Designed an advisor-driven orchestration layer that caps conversation memory to the last 20 messages exchanged between user and assistant, balancing relevant context with prompt size across multiple concurrent workspaces

Redis-Backed API Rate Limiter

Java, Spring Boot, Redis, Docker | [GitHub Repo](#)

- Designed and built a reusable API rate-limiting library supporting per-user and per-IP throttling via Fixed Window Counter and Token Bucket algorithms, enforcing a default limit of 200 requests per minute per user
- Achieved atomic, race-condition-free counter updates under concurrent load by implementing Redis-backed shared state, enabling consistent limits across multiple application instances
- Built thread-safe request validation using custom Spring Filters and Interceptors, decoupling rate-limiting logic from core application code
- Implemented standards-compliant HTTP 429 responses with retry-after headers enforcing a cooldown before clients can retry, and containerized Redis with Docker for a quick, reproducible local setup

Airbnb-Style Hotel Booking Backend

Java, Spring Boot, Hibernate, PostgreSQL, JWT, Stripe | [GitHub Repo](#)

- Architected a layered Spring Boot backend spanning hotel management, room management, and end-to-end booking workflows across 15+ REST endpoints and 10+ normalized entities
- Implemented JWT authentication and role-based access control (RBAC) to secure REST endpoints across 3 roles — guest, host, and admin
- Prevented double-booking under concurrent requests by applying pessimistic locking to critical booking transactions
- Designed a normalized PostgreSQL schema with Hibernate/JPA using DTO mapping, request validation, and pagination for clean, contract-driven API design; integrated Stripe payments and documented all endpoints with Swagger/OpenAPI

TECHNICAL SKILLS

- Languages:** Java, SQL
- Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST API Design
- Databases:** PostgreSQL, Redis, Vector DB (Qdrant)
- Authentication & Security:** JWT, RBAC
- Core Concepts:** Rate Limiting, Caching, Concurrency Control, Database Modeling & Indexing, Exception Handling, OOP
- Tools:** Git, GitHub, Docker, Postman, Maven, IntelliJ IDEA, Claude Code
- AI Integration:** Spring AI, Gemini API, LLM Response Streaming, Retrieval-Augmented Generation (RAG), Prompt Orchestration

ACHIEVEMENTS & CERTIFICATIONS

- Solved 400+ [LeetCode](#) problems with a 1500+ Contest Rating
- Coding Shuttle: 0–100 Spring Boot Cohort | PW Skills: Decode DSA with Java
