EDUCATION

Noida Institute of Engineering and Technology (NIET)

Aug 2024 – May 2028 (Expected)

B.Tech in Computer Science & Engineering — CGPA: 8.3/10 (through 3rd Semester)

Coursework: Data Structures & Algorithms, OOP, Database Management Systems, Operating Systems, Computer Networks, Software Engineering

EXPERIENCE

Java Developer Intern — Axlero Solutions (Remote)

April 2026 – July 2026

- Designed and implemented 6–10 RESTful APIs from scratch for an internal user and role management service using core Java and Spring Boot, following a layered service architecture
- Built JWT-based authentication and role-based authorization to secure admin-facing endpoints, enforcing access control across user and role management workflows
- Modeled a PostgreSQL schema to support user and role administration, translating business requirements into a normalized relational data model within a 4–6 person engineering team
- Maintained backend reliability through systematic debugging and Git-based version control across iterative development cycles

PROJECTS

AI-Powered App Builder Backend (Lovable Clone)

Solo Project

Java, Spring Boot, PostgreSQL, JWT, Spring AI, Gemini Flash

- Architected a modular monolithic backend with layered separation of concerns to power an AI-assisted application development platform
- Engineered a streaming response pipeline using Spring AI to deliver incremental, token-by-token LLM output to the client in real time
- Designed project-scoped chat session management to isolate and persist contextual AI conversations across multiple concurrent workspaces
- Built a secure file ingestion pipeline handling upload, metadata persistence, and project-level file organization
- Architected an advisor-driven orchestration layer that injects conversation memory and project context into LLM requests, decoupling prompt construction from core business logic

Distributed API Rate Limiter

Java, Spring Boot, Redis, Docker

- Designed a reusable, distributed rate-limiting library supporting per-user and per-IP throttling via Fixed Window Counter and Token Bucket algorithms
- Achieved atomic, race-condition-free counter updates under concurrent load by implementing Redis-backed Lua scripting for distributed state management
- Built thread-safe request validation using custom Spring Filters and Interceptors, decoupling rate-limiting logic from application code
- Implemented standards-compliant HTTP 429 responses with retry-after headers, and containerized Redis with Docker for reproducible local environments

Airbnb-Style Hotel Booking Backend

Java, Spring Boot, Hibernate, PostgreSQL, JWT, Stripe

- Architected a layered Spring Boot backend spanning hotel management, room management, and end-to-end booking workflows
- Implemented JWT authentication and role-based access control (RBAC) to secure REST endpoints across guest, host, and admin roles
- Prevented double-booking under concurrent requests by applying optimistic locking to critical booking transactions
- Designed a normalized PostgreSQL schema with Hibernate/JPA, using DTO mapping, request validation, and pagination for clean, contract-driven API design
- Integrated Stripe for payment processing and documented all endpoints with Swagger/OpenAPI; deployed on Railway with Supabase-hosted PostgreSQL

TECHNICAL SKILLS

Languages: Java, SQL

Frontend: HTML, CSS, JavaScript

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST API Design

Databases: PostgreSQL, Redis, Vector DB

Authentication & Security: JWT, RBAC

Core Concepts: Rate Limiting, Caching, Concurrency Control, Database Modeling & Indexing, Exception Handling, OOP

Tools: Git, GitHub, Docker, Postman, Maven, IntelliJ IDEA, Qdrant

AI Integration: Spring AI, Gemini API, LLM Response Streaming, Prompt Orchestration

ACHIEVEMENTS & CERTIFICATIONS

- Solved 400+ LeetCode problems with a 1500+ LeetCode Contest Rating.
- Coding Shuttle: 0–100 Spring Boot Cohort (Spring Boot, REST APIs, Spring Security, JPA, Hibernate).
- Completed PW Skills Decode DSA with Java program.
